New companies

Semiconductors + Aerospace and defence

Round 1 and Round 2 raw inputs for Akshaj. Research follows the README in the new eight-company archive. The supplied templates are retained, with source comments, calculation components and a complete missing-field register.

Industry	Companies
Semiconductors	NXPI - NXP; 2454.TW - MediaTek; 005930.KS - Samsung Electronics; 8035.T - Tokyo Electron
Aerospace and defence	TXT - Textron; AIR.PA - Airbus; LDO.MI - Leonardo; HO.PA - Thales

What the package contains

Two input workbooks; matching CSV tables; 537 retained facts and identity entries; cell-level evidence; a missing-field register; candidate figures with scope limitations; and 14 unchanged Yahoo Max monthly downloads. The monthly downloads cover the eight companies, Samsung preferred shares, SPY and the four requested currency pairs.

Conventions used

Annual inputs use the latest full-year report available by 31 October 2026. Prices use the 30 October close. Financial amounts and shares are in millions of the stated reporting currency; EPS and prices are per share. The fiscal year is not replaced by a trailing-twelve-month period.

Round 1 market-cap proxies use actual shares outstanding at the annual cash-and-debt date. Round 2 diluted shares add the latest quantified incremental dilution, with both dates recorded. These are mixed-date proxies. Samsung values its ordinary and preferred classes separately. Tokyo Electron shares and historical EPS use the post-split basis.

IFRS debt excludes leases; lease totals appear in notes. US GAAP debt includes finance leases. Tokyo Electron uses Japanese GAAP and a flagged reported-borrowing R8 fallback. Corporate cash excludes customer balances; Airbus corporate-only cash remains unverified.

How to read the workbooks

Peach blanks mean MISSING. Grey blanks are intentionally inapplicable or not separately reported. Yellow inputs require review because they use a secondary estimate, older guidance or an explicit convention. Each populated financial input has a source comment and a dated Cell evidence entry. Unverified candidates are not substituted into the accepted inputs.

Follow-up checked all 38 original gaps. Three cells are now filled: Textron gross interest expense, reconciled interest income and NXP historical long-term target. 35 required cells remain MISSING; 32 blanks are intentional and 11 continuing-EPS fields are not separately reported. The final appendix lists every blank. Counts refer to cells, so a fact can appear in both rounds.

No ranking, recommendation, price target, DCF result or student conclusion is supplied. Pat checks WInS and decides how to treat exclusions and incomplete inputs. The research cannot be submitted as the team's own writing.

Screens and historical risk

All market-cap and cash-flow screens below are calculated from the dated facts in the workbooks. A positive screen is a factual test, not an investment conclusion. No pending acquisition of a listed parent was identified in the reviewed material; this does not establish that no transaction could occur. Business-level transactions are noted on the company pages.

Ticker	Market cap USD bn	Positive FCF	Bank-like	Worst USD year	Return
NXPI	65.64	Y	N	2018	-37.05%
2454.TW	191.64	Y	N	2022	-47.89%
005930.KS	1,095.45	Y	N	2008	-40.92%
8035.T	137.31	Y	N	2022	-46.68%
TXT	14.94	Y	Y	2008	-79.96%
AIR.PA	169.74	Y *	Y	2008	-46.79%
LDO.MI	33.47	Y *	N	2011	-65.75%
HO.PA	54.28	Y *	N	2010	-31.07%

* Airbus, Leonardo and Thales use combined tangible/intangible cash capital expenditure for a conservative positive-FCF screen. Their required PPE-only cash-capex inputs remain MISSING. Samsung market cap includes the preferred class. All eight dated market-cap proxies exceed USD 2 bn.

Risk calculation and its limits

Worst years use complete December-to-December, dividend-adjusted returns in USD through 2025. Formula: ending adjusted close x ending USD-per-local rate / (starting adjusted close x starting USD-per-local rate) - 1. Partial 2026 and partial first years are excluded. Yahoo history may begin after the original listing, so the result is the worst observed complete year, not a guaranteed lifetime minimum.

The 5-year monthly beta input is Yahoo's displayed provider beta, observed 3 November 2026. It is not independently calculated against USD SPY returns. The original Max histories permit the team to perform that separate calculation. The Monthly prices template tab is left empty because the README asks for original CSVs separately.

An erroneous TWD=X December 2014 close of 3.67 lies outside Yahoo's own monthly range of 30.123-31.584. The calculation replaces that endpoint with the Federal Reserve's last available December rate. Earlier years before Yahoo FX coverage also use Federal Reserve rates. Original downloads remain unchanged. Fed noon rates and Yahoo closing rates have different timestamps.

Dated source links

Yahoo price histories: NXPI, 2454.TW, 005930.KS, 8035.T, TXT, AIR.PA, LDO.MI, HO.PA. Closing prices dated 30 October 2026; histories checked 3 November 2026. Risk endpoints and calculations are in Annual_USD_returns.csv and the workbook Risk rows.

FX downloads: EURUSD=X, JPY=X, KRW=X, TWD=X. Federal Reserve supplements: DEXUSEU, DEXJPUS, DEXKOUS, DEXTAUS. Checked 3 November 2026.

Pretax income	2,663	Total debt	12,237
Operating cash flow	2,820	PPE cash purchases	397
D&A;	832	Corporate cash	3,267

30 October close: **259.61 USD**. Yahoo history (2026-10-30; checked 3 Nov 2026).

Latest guidance and company targets

Q 4 2026 only: "Total Revenue" USD 3,750 m low /3,850 m midpoint /3,950 m high. Reported GAAP. No full-year numeric revenue range was located; annual growth input remains MISSING.

Latest guidance source (27 October 2026 release; Q4 2026 outlook; checked 3 Nov 2026).

Historical management target from 7 November 2024: company revenue CAGR of 6%-10% from 2024 E to 2027 E, with approximately USD 16.0 bn of 2027 E revenue at the midpoint. The 2024 E base was approximately USD 12.6 bn. No rebase to FY2025 actuals and no claim that this is newly reaffirmed FY2026 guidance.

Target / timetable source (Investor Day, 7 November 2024; target period 2024 E to 2027 E; checked 3 Nov 2026).

Three-year revenue consensus

FY2026: 14,314m USD; FY2027: 16,023m USD; FY2028: 17,417m USD. Analyst estimates, not company guidance. Forecast source (FY2026/2027/2028; retrieved 3 Nov 2026; checked 3 Nov 2026).

Definitions requiring attention

Debt includes the reported finance-lease total. Its current/non-current split is unavailable, so lease-inclusive long-term debt for both red-flag years remains blank. D&A is reconciled from depreciation, software amortisation and other intangible amortisation.

The latest release provides a quarterly revenue range only. The historical 2024 Investor Day target is now verified from original slides; it is not current annual revenue guidance.

Sources for the definition notes: Annual statements; Latest quantified dilution (Quarter ended 27 Sep 2026; checked 3 Nov 2026). See dated company evidence and the final missing-field appendix.

FY0 financial input	Amount	FY0 financial input	Amount
Revenue	333,605,938	Operating income	43,601,051
Pretax income	49,481,471	Total debt	20,397,198
Operating cash flow	85,315,148	PPE cash purchases	47,522,179
D&A;	46,926,592	Corporate cash	125,821,399

30 October close: **225,000 KRW**. Yahoo history (2026-10-30; checked 3 Nov 2026).

Total lease liabilities: 4,841,941m KRW. Excluded from IFRS borrowing debt. Lease note (FY2025; checked 3 Nov 2026).

Latest guidance and company targets

No numeric full-year consolidated revenue range in the 29 Oct release. Management expects AI-driven demand to exceed industry supply in 2027; segment production/product commentary is qualitative. Full-year 2026 capital expenditure expected KRW 84.4 trn; this is capex, not revenue guidance.

Latest guidance source (29 Oct 2026; checked 3 Nov 2026).

The 29 Oct 2026 release describes 2027 AI-related demand and multi-year supply contracts but gives no quantified long-term consolidated revenue-growth target. Numeric target MISSING.

Target / timetable source (29 Oct 2026; checked 3 Nov 2026).

Three-year revenue consensus

FY2026: 722,297,000m KRW; FY2027: 1,011,677,000m KRW; FY2028: 1,119,138,000m KRW. Analyst estimates, not company guidance. Forecast source (FY2026/2027/2028; retrieved 3 Nov 2026; checked 3 Nov 2026).

Definitions requiring attention

The market-cap proxy values both participating share classes at their respective prices. Income attributable to the parent is used across both classes; diluted EPS refers to ordinary shares. Round 2 diluted shares also add reported common-share dilution.

Total stock-based compensation is MISSING. Explicit current-period components are retained separately because further provision reclassifications have no verified current-period expense allocation. Short-term financial instruments are included in corporate cash.

Sources for the definition notes: Annual statements; Latest quantified dilution (Quarter ended 30 Jun 2026; checked 3 Nov 2026). See dated company evidence and the final missing-field appendix.

SEMICONDUCTORS

Tokyo Electron | 8035.T

Japan | Tokyo Stock Exchange | Japanese GAAP | FY2026 ended 2026-03-31

Annual financial values below are in millions of JPY. Annual statements; 2026-03-31; checked 3 November 2026. Exact line locators are in Source_ledger.csv.

FY0 financial input	Amount	FY0 financial input	Amount
Revenue	2,443,533	Operating income	624,936
Pretax income	748,180	Total debt	0
Operating cash flow	539,732	PPE cash purchases	208,984
D&A;	80,982	Corporate cash	506,250

30 October close: **9,514 JPY**. Yahoo history (2026-10-30; checked 3 Nov 2026).

Total lease liabilities: 38,342m JPY. All lease types combined; not a quantified finance-lease subtotal. Lease note (FY2026 ended 31 Mar 2026; checked 3 Nov 2026).

Latest guidance and company targets

Reported Japanese-GAAP full-year point forecast: "Net sales (Millions of yen)3,700,000"; low=high JPY 3,700,000 m. Company published growth 51.4%; spreadsheet computes exact growth from FY 2026 revenue.

Latest guidance source (30 Oct 2026; FYending 31 Mar 2027; checked 3 Nov 2026).

Medium-term plan targets by FY2027: net sales JPY 3 trn or more, operating margin 35% or more, ROE 30% or more. The 30 Oct 2026 annual revenue forecast is newer and higher than this older plan revenue threshold.

Target / timetable source (FY2026 integratedreport published 2026; checked 3 Nov 2026).

Three-year revenue consensus

FY2027: 3,529,235m JPY; FY2028: 4,450,064m JPY; FY2029: 5,227,174m JPY. Analyst estimates, not company guidance. Forecast source (FY2027/2028/2029; retrieved 3 Nov 2026; checked 3 Nov 2026).

Definitions requiring attention

The accounting standard is Japanese GAAP. A five-for-one split became effective on 1 October 2026; shares and EPS are on that basis. Borrowings are reported as nil, but unquantified finance leases are described as immaterial. The borrowing-only R8 convention requires review.

The latest summary lacks an exact incremental diluted-share count. An older annual count is a dated candidate only. Interest expense, complete share-based compensation and depreciation-only amounts remain unverified. The full-year revenue forecast supersedes the older interim-only web table.

Sources for the definition notes: Annual statements; MISSING. See dated company evidence and the final missing-field appendix.

FY0 financial input	Amount	FY0 financial input	Amount
Revenue	19,503	Operating income	1,588
Pretax income	1,649	Total debt	3,881
Operating cash flow	1,750	PPE cash purchases	MISSING
D&A;	657	Corporate cash	3,238

30 October close: **51.76 EUR**. Yahoo history (2026-10-30; checked 3 Nov 2026).

Total lease liabilities: 608m EUR. Excluded from IFRS borrowing debt. Lease note (FY2025 /FY2024; checked 3 Nov 2026).

Latest guidance and company targets

"C. €22.1 billion of revenues" for FY 2026, including Iveco Defence. Point forecast; low=high EUR 22,100 m. Q 3 results scheduled November, after cutoff.

Latest guidance source (30 Sep 2026; checked 3 Nov 2026).

Industrial plan targets 2030 revenue EUR 30 bn and 2025-2030 CAGR 9%, with EUR 126 bn cumulative 2026-2030 revenue. March 2026 current-perimeter plan excludes Iveco Defence; do not combine silently with later guidance/consensus including Iveco.

Target / timetable source (12 Mar 2026; 2026-2030 plan; checked 3 Nov 2026).

Three-year revenue consensus

FY2026: 22,188m EUR; FY2027: 24,580m EUR; FY2028: 26,750m EUR. Analyst estimates, not company guidance. Forecast source (FY2026/2027/2028; snapshot 9 Oct 2026; checked 3 Nov 2026).

Definitions requiring attention

The income statement reports costs by nature, not cost of revenue and SG&A by function. Cash capital expenditure combines PPE and intangibles. Depreciation includes investment property, while the model PPE input excludes that small separate balance; this scope difference is flagged.

The March industrial plan excludes Iveco Defence, whereas later annual guidance and company-published consensus include it. Related-party financial income/expense is not assumed to be purely interest. The space combination with Airbus and Thales concerns business activities rather than a listed-parent takeover.

Sources for the definition notes: Annual statements; Latest quantified dilution (6 M ended 30 Jun 2026; checked 3 Nov 2026). See dated company evidence and the final missing-field appendix.

Space-business memorandum, 23 October 2025; reviewed 3 November 2026.

FY0 financial input	Amount	FY0 financial input	Amount
Revenue	22,136.4	Operating income	2,086.7
Pretax income	MISSING	Total debt	4,796.7
Operating cash flow	3,321.8	PPE cash purchases	MISSING
D&A;	1,087.3	Corporate cash	4,491.1

30 October close: **235.7 EUR**. Yahoo history (2026-10-30; checked 3 Nov 2026).

Total lease liabilities: 1,332.8m EUR. Excluded from IFRS borrowing debt. Lease note (FY2025 /FY2024; checked 3 Nov 2026).

Latest guidance and company targets

Organic sales growth at the "upper-end of the +6% to+7% guided range, and potentially beyond". Reported revenue range EUR 23,300-23,600 m usesend September scope, first 9 m average FX and EURUSD 1.18 for Q 4. Midpoint growth in workbook is reported-currency growth, not organic growth.

Latest guidance source (22 Oct 2026; checked 3 Nov 2026).

Management is confident of reaching the upper end of 5%-7% organic revenue CAGR over 2024-2028, adjusted EBITmargin 13%-14% in 2028 and 95%-105% average cash conversion over 2024-2028. These are company targets, not verified future outcomes.

Target / timetable source (3 Mar 2026; 2024-2028 plan; checked 3 Nov 2026).

Three-year revenue consensus

FY2026: 23,816m EUR; FY2027: 25,918m EUR; FY2028: 28,064m EUR. Analyst estimates, not company guidance. Forecast source (FY2026/2027/2028; 16 Oct 2026; checked 3 Nov 2026).

Definitions requiring attention

The reported Income from operations subtotal is used. The reported pretax subtotal in the tax note excludes equity-affiliate income. Full pretax profit is derived, so the as-reported input stays blank. Yahoo differs from that derivation by EUR 0.5 m, which is unresolved. Cash capex combines tangible and intangible purchases.

Corporate cash excludes other current financial assets and related-party financing accounts. Depreciation and net PPE include right-of-use assets. The proposed space combination concerns businesses rather than acquisition of the listed parent.

Sources for the definition notes: Annual statements; Latest quantified dilution (6 M ended 30 Jun 2026; checked 3 Nov 2026). See dated company evidence and the final missing-field appendix.

Space-business memorandum, 23 October 2025; reviewed 3 November 2026.

Coverage, verification and AI-use record

Secondary and dated information

Market Screener consensus is a provider estimate. The NXP, MediaTek, Samsung, Tokyo Electron, Textron and Airbus snapshots were collected on 3 November and are not archived 30 October estimates. Leonardo uses its company-published median consensus dated 9 October; Thales uses company consensus dated 16 October reproduced by a secondary source. Forecast years and currencies are explicit. Growth is calculated from successive revenue levels.

Yahoo provider betas were observed on 3 November. Taiwan's 2.03% and Korea's 4.008% 10-year yields are dated secondary observations that were not fully verified against an official closing series. Japan's 2.817% comes from the Ministry of Finance series. The USD 4.94% and EUR 3.34% yields are the team conventions; this handoff does not independently certify those two rates.

NXPI currency yield source (2026-10-30; checked 3 Nov 2026).

AIR.PA currency yield source (2026-10-30; checked 3 Nov 2026).

2454.TW currency yield source (2026-10-30; checked 3 Nov 2026).

005930.KS currency yield source (2026-10-30; checked 3 Nov 2026).

8035.T currency yield source (2026-10-30; checked 3 Nov 2026).

Access limitations

NXP's release and PDF returned HTTP 403 to direct downloads; the release text and guidance were verified through the web reader. MediaTek pages at Simply Wall St and Finanzen returned 403, and an alternate Tokyo Electron forecast host did not resolve. The accessible consensus pages were used instead. The Thales regulated-information page returned no substantive content; its issuer financial statements were obtained through Euronext.

Absence of a separate reported line is distinguished from a failed download. Missing totals are not inferred as zero. Dated candidate figures, including combined capex, Manufacturing-only current amounts, old dilution and partial share-pay costs, are listed in Unverified_candidates.csv and below the Round 2 valuation inputs.

AI-use log - 3 November 2026

Tool / activity	Use and retained audit trail
Codex research assistance	Read the supplied README and templates; collected primary filings, company releases and secondary market data. Retained URLs, dates and statement locators.
Web search and signed-in Yahoo Finance	Retrieved market histories and provider fields. Original Yahoo CSVs are preserved unchanged. Did not place trades or send messages.
Spreadsheet authoring and calculation	Entered sourced raw inputs; added comments and evidence tables; calculated market-cap proxies, diluted-share proxies, sequential consensus growth and annual USD returns. Formula checks and visual checks were performed.
Research handoff	Created this separate report, missing-field register and candidate list. Did not supply rankings, recommendations, DCF outcomes or team conclusions.

Follow-up AI use, 3 November 2026: reviewed all 38 gaps using filings, original investor slides and expanded signed-in Yahoo Finance Gold statements. Filled three cells, including a transparent interest reconciliation and a dated historical target. Recorded incompatible provider labels and unresolved scope differences without treating them as verified inputs. Both workbooks, sources, candidate list and missing-field register were updated. Gap_review_38_cells.csv records each outcome.

Student verification remains required: open the sources, check units and periods, and record this assistance in the team AI-use log. Write conclusions independently.

Every remaining MISSING field

The following register covers all 35 remaining required blank cells. Repeated fields in different worksheets are listed together when they share one reason. MISSING means the required definition was not verified; candidate amounts are not accepted replacements. Source links were checked on 3 November 2026.

NXP Semiconductors (NXPI) - 3 cells

R2 / Valuation inputs / row 2 / guidance_next_fy_revenue_growth

27 October 2026 release gives Q 4 revenue USD 3,750 m-3,950 m only. No numeric full-year range is reported. Numeric annual revenue-guidance growth remains MISSING; a quarterly range or non-revenue target is not annual revenue guidance.

Limits a guidance-based year-1 forecast; does not prevent use of the team-authorized consensus fallback. No data purchase is needed to substitute an undisclosed management range. The team method permits the already documented dated consensus fallback for year 1.

Source 1; Source 2; checked 3 November 2026.

R2 / Red flags / row 2 / long_term_debt; R2 / Red flags / row 3 / long_term_debt

Annual Note 15 reports total finance leases of USD 15 m / 17 m, without a verified current/non-current split. Yahoo Gold long-term debt and capital lease obligation equals reported borrowings only, USD 10,972 m / 10,354 m. Its broad label does not supply the missing lease allocation.

Required for exact lease-inclusive long-term debt. Lease totals are small relative to borrowings, but the field remains definitionally incomplete. Request the non-current finance-lease liability for both year ends. R8 does not establish how a quantified total should be split by maturity.

Source 1; Source 2; checked 3 November 2026.

MediaTek (2454.TW) - 1 cells

R2 / Valuation inputs / row 3 / guidance_next_fy_revenue_growth

30 October 2026 prepared remarks give Q 4 revenue TWD 210,100 m-221,800 m. Full-year growth commentary is qualitative and USD-based; it is not a numeric full-year TWD range. Numeric annual revenue-guidance growth remains MISSING; a quarterly range or non-revenue target is not annual revenue guidance.

Limits a guidance-based year-1 forecast; does not prevent use of the team-authorized consensus fallback. No data purchase is needed to substitute an undisclosed management range. The team method permits the already documented dated consensus fallback for year 1.

Source 1; Source 2; checked 3 November 2026.

Samsung Electronics (005930.KS) - 2 cells

R2 / Valuation inputs / row 4 / stock_based_comp

Explicit consolidated share-pay expense components total KRW 548,250 m, but incentive/provision reclassifications of 166,604 m have no identified current-year expense portion. Yahoo Gold has no aggregate stock-based compensation row. A separately indexed PSU amount of 152,091 m belongs to standalone Company statements, not the consolidated 166,614 m PSU expense; it is not substituted.

High: the prescribed SBC-inclusive DCF. Request a consolidated all-plan expense reconciliation, including equity- and cash-settled awards and the expense period of reclassified provisions.

Source 1; Source 2; checked 3 November 2026.

R2 / Valuation inputs / row 4 / guidance_next_fy_revenue_growth

29 October 2026 release gives qualitative business outlook and a capex plan, without a numeric full-year consolidated revenue range. Numeric annual revenue-guidance growth remains MISSING; a quarterly range or non-revenue target is not annual revenue guidance.

Limits a guidance-based year-1 forecast; does not prevent use of the team-authorized consensus fallback. No data purchase is needed to substitute an undisclosed management range. The team method permits the already documented dated consensus fallback for year 1.

Source 1; Source 2; checked 3 November 2026.

Tokyo Electron (8035.T) - 5 cells

R2 / Valuation inputs / row 5 / stock_based_comp

Annual stock-option expense is JPY 11,405 m, but a complete expense total including BIP/ESOP trust plans is not quantified. Expanded Yahoo Gold cash flow has no separate stock-based compensation row. Other non-cash items cannot be assumed to equal share pay.

High: the prescribed SBC-inclusive DCF. Request the annual expense for all share-award arrangements and reconciliation to the option-only disclosure.

Source 1; Source 2; checked 3 November 2026.

R2 / Valuation inputs / row 5 / interest_expense

No separate annual interest-expense figure was found in the primary statements or expanded Yahoo Gold income statement. Yahoo reports interest income but no expense row. Neither absent data nor nil reported borrowings establishes zero interest expense, particularly with leases.

Relevant to interest and debt-cost adjustments. Magnitude cannot be established from the absent line. Request interest expense including any finance-lease interest, or an explicit nil confirmation for the applicable year.

Source 1; Source 2; checked 3 November 2026.

R2 / Valuation inputs / row 5 / diluted_shares_m

The 30 October 2026 summary reports rounded diluted EPS but no exact incremental diluted-share count. The annual count of 6.750 m after the five-for-one split is older. Yahoo annual weighted-average diluted shares are also older and are not the latest incremental count required by the template.

High: per-share equity valuation. Obtain the latest exact diluted-share reconciliation from the company. A filing issued after 31 October would require a cutoff exception; rounded EPS is insufficient.

Source 1; Source 2; Source 3; checked 3 November 2026.

R2 / Red flags / row 8 / depreciation; R2 / Red flags / row 9 / depreciation

Yahoo Gold labels JPY 80,982 m / 62,148 m as Depreciation. The primary cash-flow statement identifies these as combined depreciation and amortisation excluding separately shown goodwill amortisation. The provider label therefore does not verify depreciation alone.

High: Beneish depreciation index and cross-year comparability. Request depreciation excluding all intangible amortisation, consistently scoped for FY2026 and FY2025.

Source 1; Source 2; checked 3 November 2026.

Textron (TXT) - 8 cells

R1 / Aerospace and defence / row 2 / operating_income_fy 0; R2 / Valuation inputs / row 6 / operating_income

No as-reported consolidated operating-income line. Yahoo Gold reports USD 1,001 m, equal to revenue less its standardized cost of revenue, SG&A and R&D rows. This is a constructed subtotal, which the supplied prompt does not permit.

High: operating margin, peer score and flat-margin DCF. A reported consolidated subtotal or an explicit change by Pat to permit a constructed operating-income definition is needed.

Source 1; Source 2; checked 3 November 2026.

R1 / Aerospace and defence / row 2 / current_assets_fy 0; R1 / Aerospace and defence / row 2 / current_liabilities_fy 0; R2 / Red flags / row 10 / current_assets; R2 / Red flags / row 10 / current_liabilities; R2 / Red flags / row 11 / current_assets; R2 / Red flags / row 11 / current_liabilities

The primary balance sheet reports only Manufacturing current subtotals; Finance is unclassified. Yahoo Gold shows current assets of USD 8,572 m / 7,751 m, but current liabilities of 4,353 m / 4,394 m exactly match Manufacturing-only liabilities. The provider scope is not reconciled to a consistently classified consolidated balance sheet.

High: liquidity, accruals and red-flag comparisons. Request a consolidated current/non-current allocation for Finance and Manufacturing from investor relations. Manufacturing-only figures cannot fill consolidated inputs.

Source 1; Source 2; checked 3 November 2026.

Airbus (AIR.PA) - 6 cells

R1 / Aerospace and defence / row 3 / capex_fy 0; R2 / Valuation inputs / row 7 / capex

The EUR 3,964 m cash-purchase line combines PPE, intangibles and investment property. Yahoo Gold repeats 3,964 m under Purchase of Intangibles and Capital Expenditure, with the current Purchase of PPE row blank. No PPE-only cash split is verified.

High: prescribed FCF and DCF reinvestment input. Request the cash PPE purchase component, including the treatment of investment property. Accrual additions are not a substitute.

Source 1; Source 2; checked 3 November 2026.

R2 / Valuation inputs / row 7 / corporate_cash

Consolidated cash plus short-term securities of EUR 17,221 m includes Airbus Bank within the group. No corporate-versus-bank/customer cash reconciliation was found. A registry index confirms a 2025 Airbus Bank filing exists, but a verified freely accessible full filing plus consolidation eliminations was not obtained.

High: equity-value bridge. The registry index is an acquisition lead only, not verified cash evidence. Obtain the 2025 Airbus Bank annual accounts through company IR or the German company register, plus a corporate cash reconciliation. The bank statement alone may not identify consolidation eliminations.

Source 1; Source 2; checked 3 November 2026.

R2 / Valuation inputs / row 7 / guidance_next_fy_revenue_growth

28 October 2026 outlook gives aircraft deliveries, adjusted EBIT and free cash flow, without a numeric annual revenue range. Numeric annual revenue-guidance growth remains MISSING; a quarterly range or non-revenue target is not annual revenue guidance.

Limits a guidance-based year-1 forecast; does not prevent use of the team-authorized consensus fallback. No data purchase is needed to substitute an undisclosed management range. The team method permits the already documented dated consensus fallback for year 1.

Source 1; Source 2; checked 3 November 2026.

R2 / Red flags / row 12 / depreciation; R2 / Red flags / row 13 / depreciation

The PPE movement table combines depreciation and impairment, EUR 2,084 m / 2,030 m. Yahoo Gold labels EUR 3,133 m / 2,853 m as Depreciation, identical to reported combined D&A. Neither series isolates the requested depreciation-only expense.

High: Beneish depreciation comparability. Request depreciation excluding amortisation and impairment for both years, with consistent PPE/ROU scope.

Source 1; Source 2; checked 3 November 2026.

Leonardo (LDO.MI) - 6 cells

R1 / Aerospace and defence / row 4 / capex_fy 0; R2 / Valuation inputs / row 8 / capex

Primary cash purchases of EUR 1,016 m combine PPE and intangibles. Yahoo Gold labels this same combined amount Purchase of PPE. The primary statement takes precedence; a cash PPE-only split is not verified.

High: prescribed FCF and DCF reinvestment input. Request the cash PPE/intangible split from the company; do not substitute accrual additions or combined purchases.

Source 1; Source 2; checked 3 November 2026.

R2 / Red flags / row 14 / cost_of_revenue; R2 / Red flags / row 15 / cost_of_revenue

Yahoo Gold cost of revenue is EUR 17,240 m / 15,747 m. Annual Note 29 identifies these exact totals as Purchase and personnel expenses, a by-nature classification including general personnel and service costs. Their allocation to cost of revenue versus SG&A is not reported, so they are not verified functional COGS.

High: Beneish gross-margin index. Using the provider mapping would change the definition. Request an audited or company-reconciled functional cost-of-sales breakdown for both years, or have Pat change the cross-company measure consistently.

Source 1; Source 2; checked 3 November 2026.

R2 / Red flags / row 14 / sga; R2 / Red flags / row 15 / sga

The primary consolidated statement reports expenses by nature. Expanded Yahoo Gold Selling General and Administrative rows are blank for both years. Total operating expense or purchase/personnel expense is not a substitute for SG&A.

High: Beneish SG&A index. Request a consistent functional selling/general/administrative allocation for both years from investor relations.

Source 1; Source 2; checked 3 November 2026.

Thales (HO.PA) - 4 cells

R1 / Aerospace and defence / row 5 / pretax_income_fy 0; R2 / Valuation inputs / row 9 / pretax_income

Note 7.1 reports EUR 1,838.4 m before tax AND before equity-affiliate income. Full pretax profit of 2,036.8 m is derived by adding affiliate income 198.4 m (or 1,640.3 m net income + 396.5 m tax). Yahoo Gold shows 2,036.3 m, a 0.5 m discrepancy not reconciled. No as-reported full pretax subtotal satisfying the prompt was found.

High for the required as-reported pretax input. The observed provider difference is small but does not resolve the reporting requirement. Ask the company to confirm full pretax scope and the provider discrepancy, or have Pat explicitly permit the documented 2,036.8 m derivation.

Source 1; Source 2; checked 3 November 2026.

R1 / Aerospace and defence / row 5 / capex_fy 0; R2 / Valuation inputs / row 9 / capex

Cash capex of EUR 756.7 m combines tangible and intangible assets. Yahoo Gold labels the same total Purchase of PPE. Primary PPE additions of 707.7 m are accrual additions; the 20.6 m payment-timing adjustment is not allocated between PPE and intangibles, preventing a cash-only PPE derivation.

High: prescribed FCF and DCF reinvestment input. Request the PPE share of actual cash purchases or the payment-timing allocation between tangible and intangible additions.

Source 1; Source 2; checked 3 November 2026.

Other blanks: intentionally not applicable or not separately reported

The following additional 43 cells are blank by design or because the requested continuing-EPS line was not separately reported. They are not guessed as zero. Every cell is also listed in Remaining_MISSING.csv and the workbook limitation sheets.

Reasons: WInS checks belong to Pat; software capex applies only to Payments; ADR ratios do not apply to these ordinary listings. Named continuing-EPS fields remain blank because the company did not separately report that measure for the specified period. Total diluted EPS is supplied where verified.
